

ONLINE SHOPPING MANAGEMENT SYSTEM

ABSTRACT:

The Online Shopping Management System (OSMS) is a comprehensive SQL project aimed at streamlining the process of online shopping. This system allows users to browse through a variety of products, add items to their cart, and securely complete transactions. The project utilizes a SQL database to store and manage product information, user details, order history, and transaction records. Key features include user authentication, product categorization, search functionality, and order management. This abstract provides an overview of the objectives, functionalities, and benefits of the OSMS SQL project.

EXISTING SYSTEM:

- Amazon
- Flipkart
- Meesho
- Myntra

INTRODUCTION:

An Online Shopping Management System is a web-based application designed to simplify and manage the processes associated with online shopping. This system can handle various aspects of an online store, including product listings, customer accounts, orders, payments, and inventory. For a SQL project, the system will primarily focus on the backend database design, ensuring data integrity, security, and efficiency in handling large volumes of transactions and customer interactions.

TECH STACKS :

FRONTEND : PYTHON

BACKEND : SQL

FRAMEWORK: FLASK

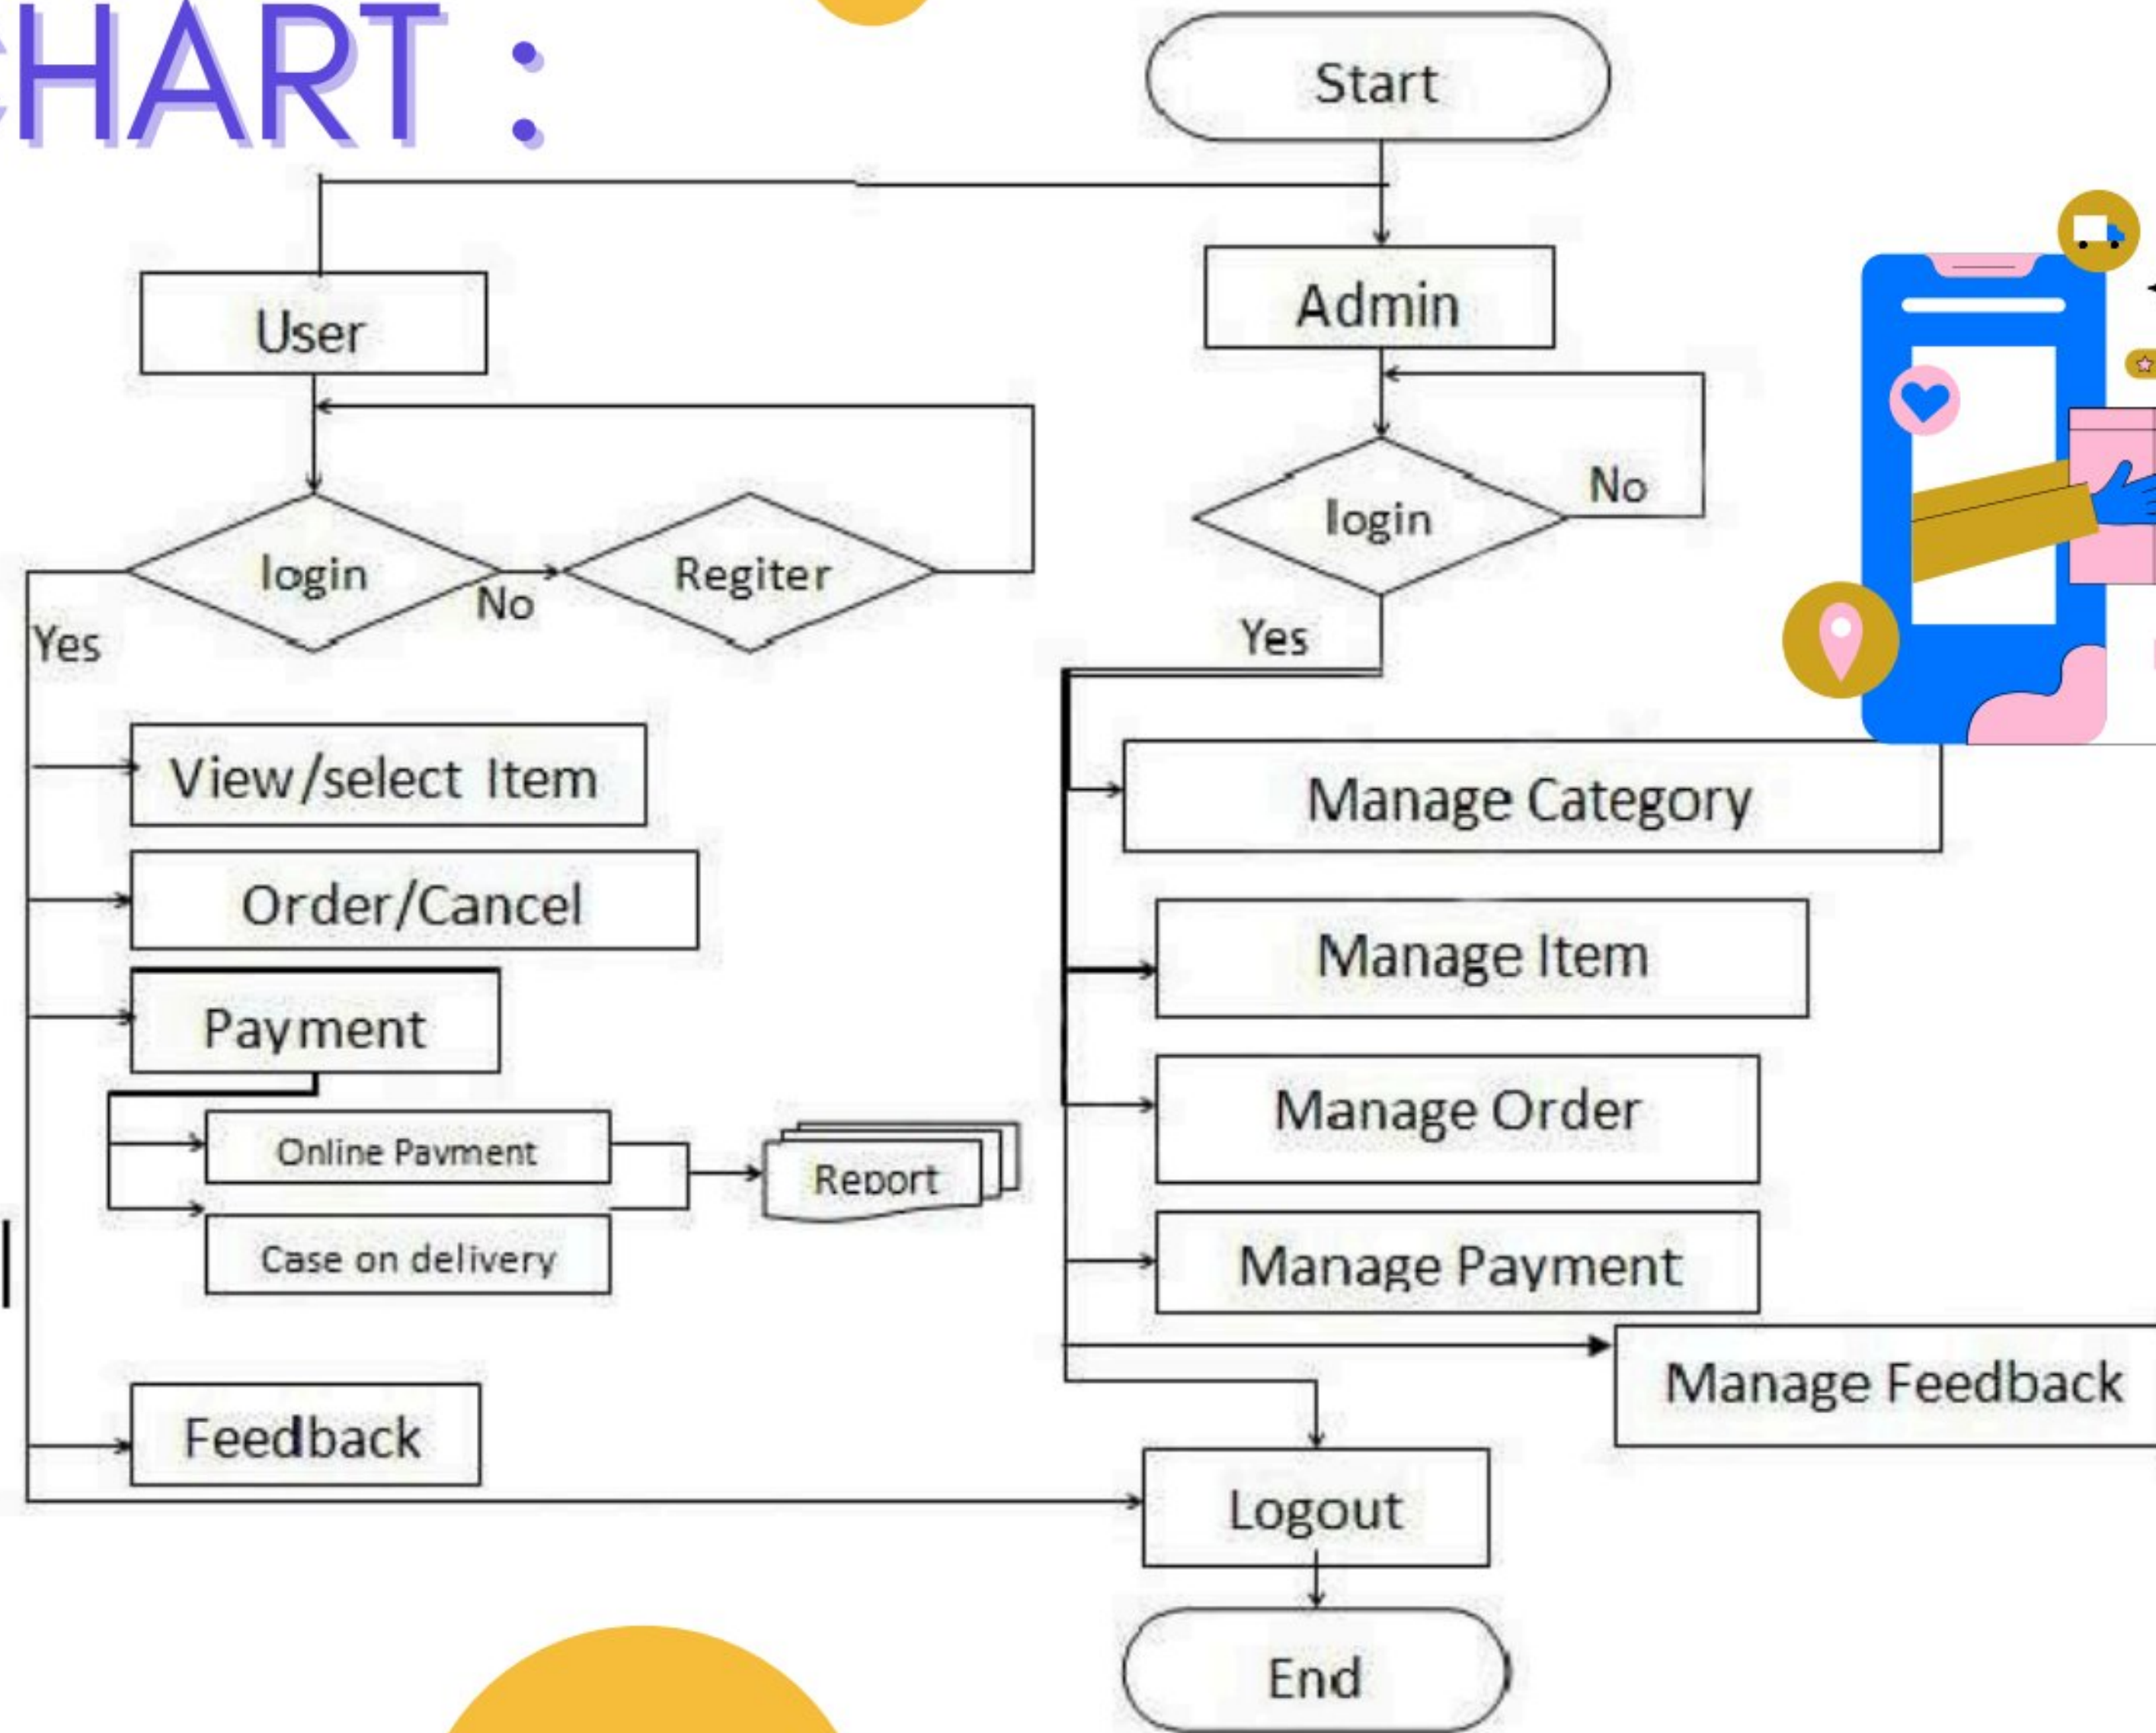

FEATURES:

- 1) User Authentication
- 2) Product Catalog
- 3) Inventory Management
- 4) Add to card
- 5) Order Management
- 6) Payment
- 7) Shipping and Delivery
- 8) Customer Support
- 9) Security
- 10) Analytics and Reporting

FLOW CHART :
